Why we choose stainless steel railing with glass?

1. Since glass railings are transparent material, you can for sure get a full, clear view of the outside even from afar, especially for the swimming pool area. This means you can keep your eye out on cases of accidents or drowning.
2. For outdoor installation, if your railing materials are wood or metal, the water can damage the material over time. While Glass is a durable material that can withstand constant moisture. It is also resistant against corrosion caused by the elements.
3. Clear glass railings with safe edge and corner, and it doesn't absorb stains, you can wipe away stains very easily. As well as the stainless steel material. You don't need to slave over them for hours just to get them to shine and sparkle.

As manufacturer of glass railing hardware since 2004, we do have other product including glass spigot, latch, post, clamps for frame/semi-frame/frameless glass railing;

Project for your review
